南京正源搪瓷设备制造有限公司  
Nanjing Zhengyuan Enamel Equipment Co., Ltd.

## 公司简介

南京正源搪瓷设备制造有限公司位于江苏省南京市溧水区白马工业园，公司由南京氟源化工管道设备有限公司于2011年投资创立，并组建成南京正源集团有限公司。

公司成立的初衷是要向中国国内的化工、医药、农药、石油化学等行业提供与国外进口搪玻璃制品同等品质的高端搪玻璃产品，同时又极大地降低采用进口产品的高昂造价。

在公司组建初期，就瞄准了搪玻璃行业的高端发展方向，先后引进吸收了日本、法国的最新搪玻璃制造技术。公司与日本八光产业株式会社签订了搪玻璃釉料原料釉块进口加工、使用技术合作协议，在国内率先使用与日本最高档搪玻璃釉料同品质的高性能釉料。公司在搪玻璃产品搪烧工艺上采用法国等西方国家先进的冷喷中温缓烧工艺，克服了国内常用的热喷高温快烧工艺带来的搪玻璃产品容易产生的缺陷等质量问题。公司消化吸收了国外独特的搪玻璃产品结构形式与制造工艺，使得搪玻璃产品的各项技术指标都有了极大的提高，形成了具有专有技术特色的搪玻璃产品，在市场上深受广大客户的好评。

公司设有技术研发、品质保证、员工培训中心，拥有完善的计算机辅助设计系统、先进数控制造设备、搪烧加工设备、完全按日本标准建造的釉料制造车间以及各种产品性能检测设备，制定了完整的严格规范的企业标准与完善的压力容器质量保证体系。

公司始终遵循“科技创新、用户至上、以人为本、和谐共赢”的经营理念，以市场为导向，竭诚为广大用户提供优质的产品和服务。

## Company Profile

Nanjing Zhengyuan Enamel Equipment Co., Ltd. is located in Nanjing city, Jiangsu province. It specializes in manufacturing glass lined reactor, glass lined storage tank, glass lined distillation tank, glass lined column, glass lined heat exchanger etc. and all kinds of non standard glass lined chemical equipment, stainless steel equipment and all kinds of glass lined accessories.

Nanjing Zhengyuan Enamel Equipment Co., Ltd. was founded in 2011, invested by Nanjing Fuyuan Chemical Pipeline Equipment Co., Ltd. which was belong to Zhengyuan Group.

The company dedicated to manufacture glass lined equipment, serving in chemical, pharmaceutical, pesticide and Food & Beverage industries.

Company possess the design and manufacturing license for type I, II and III pressure vessels, ISO 9001 certificate and ISO 14000 certificate. The product has been exported with large quantities to the overseas market and the products have a wide range of praise.

The company adopts the latest glass lining technology and high-grade strong corrosion resistance glass lined enamel from Japan, employ three Japanese senior engineers control the production process. All the glass lined equipment are burned by electric furnace with same specification in one electric furnace, making a gain of enamel equipment with glass lining porcelain evenly, non-deformation, quality reliable and stable, strong corrosion resistance, not easy collapsed, glass lining porcelain face clean and non-pollution etc.

Adhering to the operation principle of "Scientific management, all devotion, customer satisfaction and perfection pursuit" and the permanent commitment of "Be honest to every customer", we expect your precious opinions and welcome your guidance.

In the future, Nanjing Zhengyuan Enamel Equipment Co., Ltd. will continue to constantly supply the best product and service, teaming with business partners to create a World-Class glass lined equipment supplier.

## 主要设备 Main Equipments

科技创新·用户至上，以人为本·和谐共赢

Scientific management, all devotion, customer satisfaction and perfection pursuit

## 产品展示 Products

标准型搪玻璃反应釜  
Standard glass lined reactor

外包不锈钢搪玻璃反应釜  
Outsourcing stainless steel glass lined reactor

搪玻璃贮罐  
Glass lined tank

## 腐蚀特性

## Corrosion characteristics

下图显示的腐蚀速率为典型的具有代表性的酸与碱。

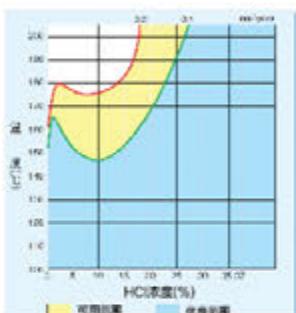

腐蚀性速率为1日24小时连续测试得出的结果。优良范围的定义为腐蚀速率在0.1mm/year以下、使用寿命在5年以上的场合。可用范围的定义为腐蚀速率在0.1—0.2mm/year之间，使用寿命在2—5年之间。谨慎使用范围定义为腐蚀速率在0.2mm/year或以上，使用寿命在1—2年或以下的场合。

The chart below shows the corrosion rates of typical acids and alkalis, obtained from a 24 hours/day continuous corrosion test. In case corrosion rate is less than 0.1mm/year, the glass can serve for more than 5 years in the condition of resisting corrosion perfectly. In case corrosion rate is 0.1~0.2mm/year, or 0.2mm/year or more, the service life will be 2~5 years, or 2 years or less, respectively.

### 盐酸 Hydrochloric acid

盐酸是化学工业中最常用的酸之一，但是对机器设备腐蚀最严重的酸。八光200BW釉显示出对盐酸的非常优良的耐腐蚀特性。右图指出的优良耐腐蚀性在一个较低的集中区域内变化，峰值出现在1%处，最低值出现在10%处，但是超过10%后优良范围又迅速增加。此表中的数据也适用于氢溴酸、氢碘酸和氯乙酸。

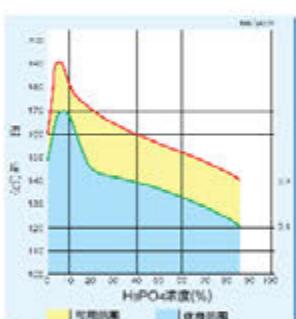

Among all kinds of acids for the chemical industry, hydrochloric acid is used most popularly, but it corrodes the materials of equipment most severely. 200BW enamel shows very excellent resistance to this corrosive acid. As indicated in this chart, corrosion resistance changes in the low concentration area, showing a peak at 1% and a minimum at 10%, but beyond 10%, it increases rapidly. This chart is also applicable to hydrobromic acid, hydroiodic acid and chloroacetic acid.

### 磷酸 Phosphoric acid

磷酸对搪玻璃的腐蚀变化与其它酸有很大的不同，通常一般的酸随着浓度的提高，搪玻璃对它们的耐腐蚀性也相应的增加，但是随着磷酸浓度的增加，搪玻璃对它的耐腐蚀性却在降低。因为磷酸通常含有含氟杂质，需要进行一周时间以上的长期耐腐蚀性试验。

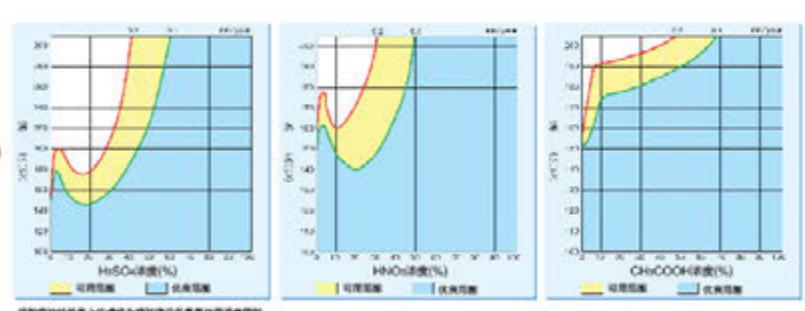

The corrosion resistance of glass to phosphoric acid changes in a much different way from that to other kinds of acids. Usually corrosion resistance of glass increases with the increase of concentration of acid, but in case of phosphoric acid, corrosion resistance decreases with the increase of concentration. As phosphoric acid often contains fluorine as an impurity, the corrosion test for a period as long as more than one week is necessary.

### 硫酸/硝酸/醋酸 Sulfuric acid / Nitric acid / Acetic acid

此类酸的耐腐蚀性，在峰值出现在一个较低的浓度值上，最小值大约出现在20%浓度左右。当浓度超过20%后，耐腐蚀性随着浓度的增加而提高。此表也适用于亚硫酸和亚硝酸。醋酸可作为有机酸的典型代表。

The corrosion resistance of these acids show a peak at a low concentration and a bottom at a concentration around 20%. When concentration exceeds 20%, corrosion resistance increases with the increase of concentration. This chart is also applicable to sulfuric acid and nitrous acid. Acetic acid is added as an example of organic acids.

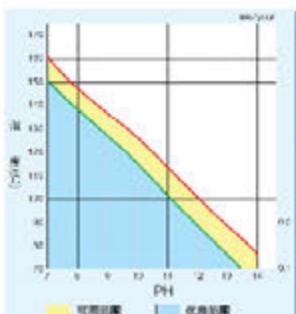

### 碱 Alkalies

在室温下，200BW釉可以耐受任何PH值的介质。但是随着温度的升高，搪玻璃对碱的耐腐蚀性能下降。对于PH>14的氢氧化钠和氢氧化钾溶液，在不同的浓度下所对应的最高使用温度分别为：10%时66°C；20%时60°C；30%时57°C；50%时54°C。

在中和操作场合，PH值为13时的最高操作温度为100°C。当碱性溶液或者固体装入容器，应当在容器搅拌良好的情况下将介质加入到中心部位，避免介质粘在搪玻璃面上而引起局部过热的现象。

在碱性无水条件下，除氟化物之外的有机金属化合物对搪玻璃没有影响。

At room temperature, 200BW enamel is fully resistant to any PH values. But with the rise of temperature, the resistance of the glass to alkali decreases. For the caustic soda and caustic potash at PH 14 or more, the maximum usable temperature at respective concentrations are: 66°C at 10%, 60°C at 20%, 57°C at 30%, 54°C at 50%. For operation of neutralization, maximum allowable temperature is 100°C at PH13. When alkaline solution or alkaline solid is charged into a vessel, care should be taken to put the material into the center of the vessel agitating the liquid well so that it may not cause sticking of the material to the glass nor any partial overheating in the vessel. Organometallic compounds except for fluorides do not influence the glass, if they are in a perfect alkali condition.

### 水 Water

在低于沸点以下温度范围内，200BW搪玻璃对液态或气态的水有优良的耐腐蚀性能，但是在超过了沸点时，对液态或气态水的最高使用温度应在150°C以下。

值得注意的是，对酸性介质有着优良耐腐蚀性的搪玻璃，并不意味着对水有着同样优良的耐蚀性。

At temperatures lower than the boiling point of water, 200BW enamel shows perfect corrosion resistance to water both in the phases of liquid and gas, but generally above the boiling point, maximum service temperature is 150°C in both phases. Attention should be paid to the fact that the glass with high acid resistance has not always good water resistance at a time.

### 氟化物 Fluoride

一般的氟化物在介质中一旦被发现，操作中应引起足够的重视。氟化物一般会混杂在磷酸、磷酸化合物、硫酸和盐酸的再生酸中。因此，在使用上述介质前，应当进行必要的耐腐蚀性测试。

Generally if only traces of fluoride is found in the liquid, sufficient care should be taken in the operation. Often fluorine is contained in phosphoric acid, phosphatic compounds, and regenerated products of hydrochloric acid and sulfuric acid. Therefore for the use of those liquids, corrosion test should be conducted before the operation.

### 盐类 Salts

对盐类（含氟盐类除外）的耐腐蚀性与溶液的PH值耐腐蚀性表相类似。例如，氯化钠是中性的，但其水溶液却呈现出腐蚀性，同样的，氯化铝溶解到水里，在溶液中离解出氯离子。200BW搪玻璃对此种盐类溶液的耐腐蚀性，可参考对盐酸耐腐蚀性数据表。

The corrosiveness of salt (except those containing fluoride) is closely related to the PH values of the solution. For instance, sodium chloride is neutral, but in its aqueous solution water acts as a corrosive agent. Also, aluminium chloride dissolves in water and gives chloric ion in the solution. For the corrosion resistance of 200BW Glass to the solutions of those salts, you are recommended to refer to the corrosion chart of hydrochloric acid.

### 有机溶剂 Organic solvents

对于有机溶剂，200BW釉在搪玻璃设备的最高操作温度界限时仍有良好的耐腐蚀性。但是，一些低介电常数液体（如己烷、二甲苯、甲苯、苯和庚烷），它们的纯液体或者与其它液体或固体的混合物，在不同液体之间、液体与气体之间、液体与器壁或附件之间的碰撞会产生静电。电火花会引燃可燃气体、使搪玻璃表面龟裂或产生针孔。在操作这类液体时应引起充分的重视。

For organic solvents, 200BW enamel shows perfect corrosion resistance up to the maximum operating temperature of the glass lined equipment. But the liquids with low dielectric constant such as the liquids of hexane, xylene, toluene, benzene and heptane, when used single or mixed with other liquids or solids, discharge static electricity between different liquids, liquids and gases, liquids and vessel wall or accessories. The sparks of such electricity may ignite combustible vapors, or cause crack or pinholes on the glass surface, and so sufficient cares are necessary in handling those liquids.

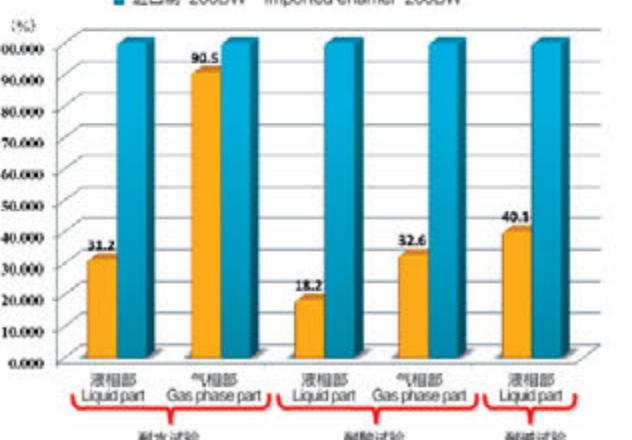

Fig.1 200BW enamel corrosion resistance test results (Blue cylinder) comparing with made in China enamel

#### ● 耐水试验: Water resistance test

搪玻璃试件经受纯水100摄氏度沸点时气相部（水蒸气）和液相部（沸腾水）连续96小时腐蚀  
Glass lining specimen from pure water 100°C boiling point of the gas phase part (steam) and liquid part (boiling water) continuous 96 hours corrosion

#### ● 耐酸试验: Acid resistance test

搪玻璃试件经受20vol%-HCL, 108°C沸点时气相部（盐酸蒸汽）和液相部（沸腾盐酸）连续96小时腐蚀  
Glass lining specimen through 20vol%-HCL, 108°C boiling point of the gas phase part (hydrochloric acid steam) and liquid part (boiling hydrochloric acid) continuous 96 hours corrosion

#### ● 耐碱试验: Alkali resistance test

搪玻璃试件经受1mol-NaOH, 80°C液相部（加热的碱溶液）连续48小时腐蚀  
Glass lining specimen through 1mol-NaOH, 80°C liquid part (heating alkaline solution) continuous 48 hours corrosion

## 物理特性

### Physical characteristics

#### 搪玻璃的物理性质 Physical properties of 200BW Glass

比重	Specific Gravity	g/cm <sup>3</sup>	2.5~2.7
比热	Specific Heat	J/kg · K	837
热传导率	Thermal Conductivity	W/m · K	0.87~1.04
硬度	Hardness	Mohs' Scale	5.5
表面粗糙度	Surface Roughness	μm	0.08~0.18
粘附强度	Adhesion Strength	(搪玻璃 - 钢 Glass lined-steel) kg/mm <sup>2</sup>	>10
拉伸强度	Tensile Strength	N/mm <sup>2</sup>	68~88
压缩强度	Compression Strength	N/mm <sup>2</sup>	784~980
弹性系数	Modulus of Elasticity	N/mm <sup>2</sup>	$49 \times 10^3 \sim 127 \times 10^3$
电气阻抗	Electrical Resistivity	Ωcm	$10^{12} \sim 10^{14}$
绝缘强度	Dielectric Strength	kV/mm	20~30

#### 抗热骤变性质 Thermal shock Resistance

搪玻璃设备的搪玻璃抗热冲击性能与玻璃表面的压缩应力有着密切的关系。压缩应力越高，则抗热冲击性能越好。另一方面，压缩应力随着温度的升高而下降。因此，允许的急热、急冷温差经常取决于容器壁温，也受到容器体积、形状、操作条件的影响。右侧两张图表给出了在不同的操作条件下寻找出最大允许急热、急冷温差值。但此表仅适用于15m<sup>3</sup>以内的标准型搪玻璃反应釜。

The thermal shock resistance of glass for glassed steel equipment is closely related with compressive stress of the glass surface: as the compressive stress grows higher, the thermal shock resistance also grows higher. On the other hand, compressive stress drops with the rise of temperature. Consequently, the allowable temperature difference for rapid heating and cooling always depends on the temperature of vessel wall. But the allowable temperature difference is influence by vessel's volume, form, operating conditions and so. The following two diagrams show a method of looking after maximum allowable temperatures in different operating conditions. But these diagrams are applicable to standard vessels of the capacities ranging from zero to 15m<sup>3</sup>.

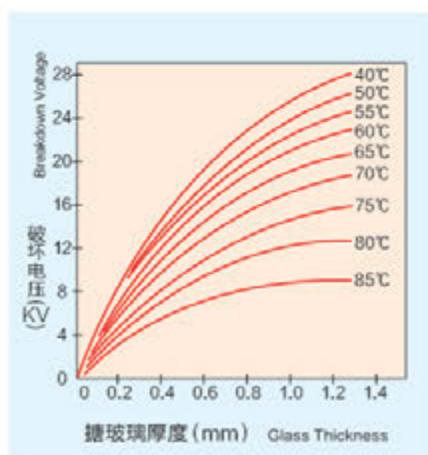

#### 高电压测试 High Voltage Test

为确保搪玻璃设备的质量，在工厂进行了DC 20kv的电火花试验，因为这是个容易造成破坏的试验，操作时要特别小心。在客户处复检时，应采用AC 50Hz 5kv的电火花试验，不推荐使用直流电火花测试仪，因为静电荷会蓄积在搪玻璃层。

搪玻璃层厚度、温度和破坏电压值之间的关系如右图所示。

To guarantee the quality of glass, spark test is carried out in the factory with DC at 20,000 Volts. As this is a breakdown test, special care should be taken for the safety of test operation. For the test conducted at the customer's site, AC with 60 cycles at 5,000 Volts is to be used. The use of DC is not recommendable, because electrostatic charges will be accumulated on the glass layer by the use of DC.

The relations between thickness of glass, temperature and breakdown voltage will be shown in the chart.

#### 容器内溶液直接注入的场合（图A）

(例1) 热的容器 ( $T_w = 180^\circ\text{C}$ ) 内注入冷的液体的场合最小允许温度 (TP <  $T_w$ )

步骤: ① 在图A横坐标轴上找出壁温  $T_w = 180^\circ\text{C}$

② 沿着  $180^\circ\text{C}$  的点画一条垂线，交于蓝色区域边线上一点

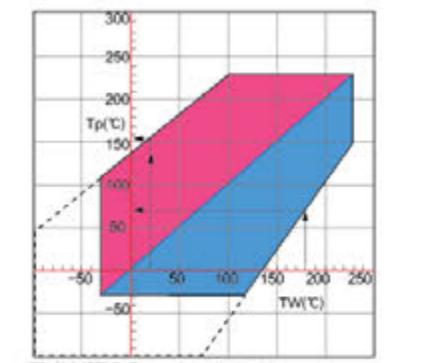

③ 过交点作一条平行于横坐标的水平线，相交于纵坐标上的Tp点。Tpmin =  $70^\circ\text{C}$

(例2) 冷的容器 ( $T_w = 20^\circ\text{C}$ ) 内注入热的液体的场合最大允许温度 (TP >  $T_w$ )

步骤: ① 在图A横坐标轴上找出壁温  $T_w = 20^\circ\text{C}$

② 沿着  $20^\circ\text{C}$  的点画一条垂线，交于红色区域边线上一点

③ 过交点作一条平行于横坐标的水平线，相交于纵坐标上的Tp点。Tpmax =  $155^\circ\text{C}$

TP: 注入液温度 Temp of pouring liquid  
Tw: 壁温 Temp of vessel wall  
图A  
冷的容器内注入热液体的场合 (TP>Tw)  
for pouring hot liquid into cold vessel (In case of TP>Tw)  
热的容器内注入冷液体的场合 (TP<Tw)  
for pouring cold liquid into the hot vessel (In case of TP<Tw)

#### Pouring liquid into the Vessel (Chart A)

(Ex.1) Minimum allowable temperature  $T_p < T_w$  for pouring a cold liquid into a hot vessel ( $T_w=180^\circ\text{C}$ )

Procedure:

① Read wall temperature  $T_w=180^\circ\text{C}$  on the axis of abscissa in Chart A.

② Draw a perpendicular at the point of  $180^\circ\text{C}$  and find an intersecting point on the blue line.

③ Draw a line parallel to the axis of abscissa from the intersecting point on the blue line, and read the intersecting point  $T_p$  on the axis of ordinate.  $T_p \text{ min}=70^\circ\text{C}$ .

(Ex.2) Maximum allowable temperature ( $T_p > T_w$ ) for pouring a hot liquid into a cold vessel ( $T_w=20^\circ\text{C}$ )

Procedure:

① Read wall temperature  $T_w=20^\circ\text{C}$  on the axis of abscissa in Chart A.

② Draw a perpendicular at the point of  $20^\circ\text{C}$  and find an intersecting point on the red line.

③ Draw a line parallel to the axis of abscissa from the intersecting point on the red line, and read the intersecting point  $T_p$  on the axis of ordinate.  $T_p \text{ max}=155^\circ\text{C}$ .

#### 容器通过夹套加热或冷却的场合（图B）

(例1) 热的容器 ( $T_w = 200^\circ\text{C}$ ) 夹套内注入冷的液体的场合最小允许温度 ( $T_j < T_w$ )

步骤: ① 在图B横坐标轴上找出壁温  $T_w = 200^\circ\text{C}$

② 沿着  $200^\circ\text{C}$  的点画一条垂线，交于蓝色区域边线上一点

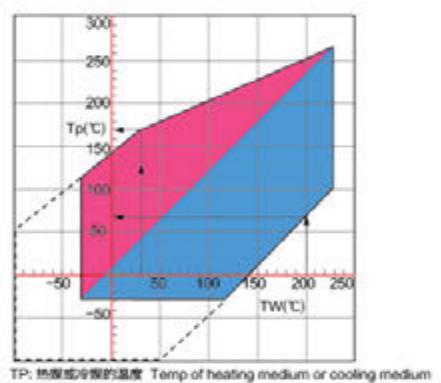

③ 过交点作一条平行于横坐标的水平线，相交于纵坐标上的Tj点。Tjmin =  $65^\circ\text{C}$

(例2) 冷的容器 ( $T_w = 30^\circ\text{C}$ ) 夹套内注入热的液体的场合最大允许温度 ( $T_j > T_w$ )

步骤: ① 在图B横坐标轴上找出壁温  $T_w = 30^\circ\text{C}$

② 沿着  $30^\circ\text{C}$  的点画一条垂线，交于红色区域边线上一点

③ 过交点作一条平行于横坐标的水平线，相交于纵坐标上的Tj点。Tjmax =  $170^\circ\text{C}$

TP: 热媒或冷媒的温度 Temp of heating medium or cooling medium  
Tw: 壁温 Temp of vessel wall  
图B  
加热 (Tj < Tw) Heating (In case of Tj < Tw)  
冷却 (Tj > Tw) Cooling (In case of Tj > Tw)

#### Heating and Cooling Vessel from the Jacket (Chart B)

(Ex.1) Minimum allowable temperature ( $T_j < T_w$ ) for pouring cooling medium into the jacket of hot vessel ( $T_w=200^\circ\text{C}$ )

Procedure:

① Read the temperature ( $T_w=200^\circ\text{C}$ ) of vessel wall on the axis of abscissa in Chart B.

② Draw a perpendicular at the point of  $200^\circ\text{C}$  and find an intersecting point on the blue line.

③ Draw a line parallel to the axis of abscissa from the intersecting point on the blue line, and read the intersecting point  $T_j$  on the axis of ordinate.  $T_j \text{ min}=65^\circ\text{C}$ .

(Ex.2) Maximum allowable temperature ( $T_j > T_w$ ) for pouring heating medium into the jacket of cold vessel ( $T_w=30^\circ\text{C}$ )

Procedure:

① Read the temperature  $T_w=30^\circ\text{C}$  of the vessel wall on the axis of abscissa in Chart B.

② Draw a perpendicular at the point of  $30^\circ\text{C}$  and find an intersecting point on the red line.

③ Draw a line parallel to the axis of abscissa from the intersecting point on the red line, and read the intersecting point  $T_j$  on the axis of ordinate.  $T_j \text{ max}=170^\circ\text{C}$ .

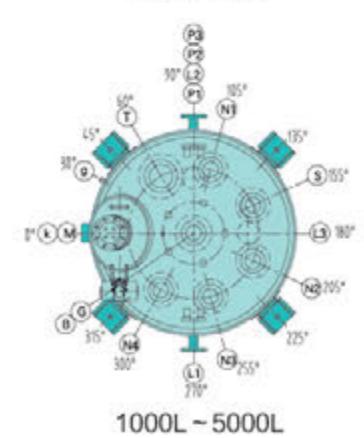

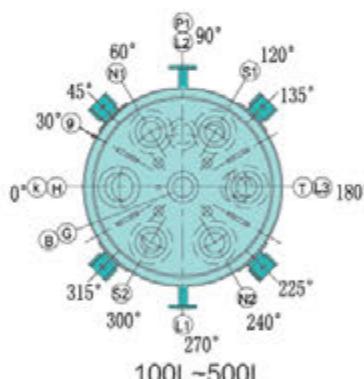

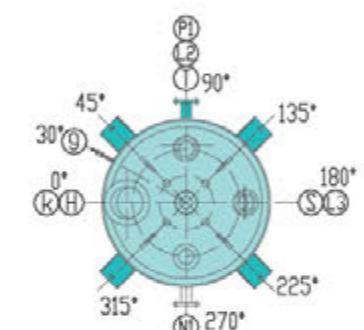

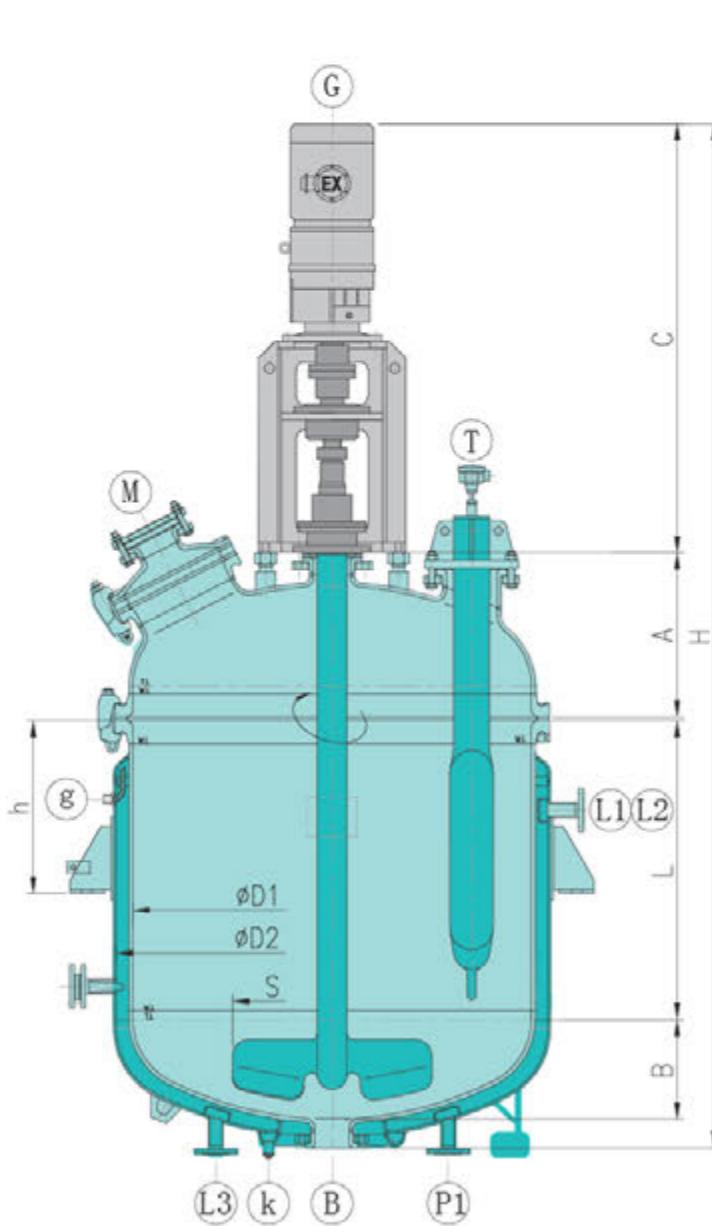

## 标准型搪玻璃开式反应釜 OR Standard glass lined reactor (Open type) OR

### ■ OR 系列 ( GB/T 25027 - 2010 )

1. 设计压力: 罐内 FV ~ 0.4 MPa 夹套 0.6MPa
2. 搅拌桨: 两叶式、四叶式、三叶后掠式、桨式、锚式、框式、推进式等
3. 轴封: 干磨式机械密封
4. 减速机: 立式斜齿轮减速电机

## 标准型搪玻璃闭式反应釜 CR Standard glass lined reactor (Close type) CR

### ■ CR 系列 ( GB/T 25026 - 2010 )

1. 设计压力: 壳内 FV ~ 0.4 MPa 夹套 0.6 MPa
2. 搅拌桨: 两叶式、三叶后掠式、桨式、推进式等
3. 轴封: 干磨式机械密封
4. 减速机: 立式斜齿轮减速电机

### ■ CR Series ( GB/T 25026 - 2010 )

1. Design pressure: Vessel FV ~ 0.4MPa Jacket 0.6MPa
2. Agitator type: Two vane type, Impeller type, Paddle type, Turbine type etc
3. Shaft seal: Dry Contact type Mechanical seal
4. Reducer: Vertical helical geared motor

## 碳化硅列管式热交换器 SIC(silicon carbide) shell and tube type heat exchanger

- 创新的密封结构形式
- 无压紧力安装更安全
- 极高的传热系数
- 广泛的耐腐蚀性能
- 极高的抗磨强度，经久的使用性能
- Innovative sealing structure type
- Safeties with non strict pressure install
- More higher heat transfer coefficient
- Widely corrosion resistance
- Extremely high wear resistance, durable use performance

### ■ 碳化硅特性 SIC Character

碳化硅管有反应烧结和无压烧结两种，无压烧结在200°C以内，几乎对目前已知的化学物质呈现惰性。我公司采用的无压碳化硅管有极高的耐腐蚀性能，并使用氢氟酸、溴素、硝酸、混酸以及有机氯产品进行了严格的测试。反应烧结碳化硅管除了氢氟酸，高浓度硫酸和硝酸外，对大部分化学物质有很好的抗腐性能。

Choice best SIC tube which is composed of reactive sintering and superfine SIC particle, It almost show inert to all known chemicals within 200degree, Our SIC tubes are highly resistant to corrosion and have been test with hydrofluoric acid, bromine, nitric acid, mixtures acid and chlorinated organic products

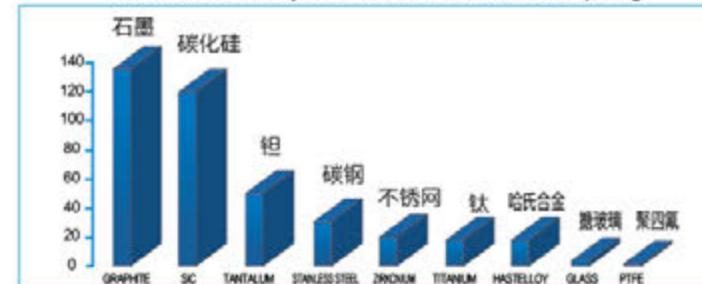

- 优良的机械性能：每一根碳化硅管都经过压力测试，确保其安全性和机械性能。
- 高耐磨性：硬度相当高，比碳化钨硬度高50%，碳化硅管非常耐磨损，可允许采用较高的介质流速，以改善热交换效率。
- 抗渗透性好：我公司使用的碳化硅管不含其他填充物。因此，即使在很高的温度和压力下，完全能耐受各种液体或气体的腐蚀，长期使用不会渗漏，在高纯度运用场合能避免污染物料。
- 极高的热传导率：碳化硅的导热系数接近纯石墨，远高于其他耐腐蚀材料（PTFE、玻璃、填充石墨，复合的特殊合金、贵金属等），这意味着有更好的换热效率，需要的换热面积和占用的空间会更小。所能获得的最高传热系数高达1400W/m<sup>2</sup>K。

### ■ 碳化硅管物理性能 SIC tubes physical properties

性能参数 Properties	单位 Units	数值 Value
成份 Composition		SiC
密度 Density	g/cm <sup>3</sup>	3.1
粒度 Grain Size	μm	4–6
努氏硬度 Knoop Hardness	Kg/mm <sup>2</sup>	2800
弯曲强度 Flexural Strength	MPa	380
压缩强度 Compressive Strength	MPa	3900
弹性模量 Elasticity Modulus	GPa	410
韦伯模量 Weibull Modulus	GPa	8
最大操作温度 (空气) Max operating temperature(Air)	°C	1650
20°C时平均比热 Mean Specific heat at 20 degree	kJ/kg · K	0.67
导热系数 Thermal Conductivity	W/m · K	105–125
渗透率 (20–1000°C) Permeability(20 to 1000°C)		在31MPa内能抵抗所有气体渗透 Proof against all gases up to 31MPa
20°C时电阻率 Electrical Resistivity at 20 degree	Ohm · cm	10 <sup>2</sup> –10 <sup>6</sup>

各类材料的导热系数对比

Thermal Conductivity of various raw material for comparing

### ■ 无压烧结碳化硅管耐腐蚀性能性能指标

Pressureless sintering of silicon carbide tube corrosion resistance performance

化学介质 Chemical medium	温度 Temperature (°C)	腐蚀速率 Corrosion rate mg/(cm <sup>2</sup> · y)
98% H <sub>2</sub> SO <sub>4</sub>	100	1.8
85% H <sub>3</sub> PO <sub>4</sub>	100	<0.2
53% HF	25	<0.2
50% NaOH	100	2.5
45% KOH	100	<0.2
70% HNO <sub>3</sub>	100	<0.2
37% HCl	86	<0.2
10% HF + 57% HNO <sub>3</sub>	25	<0.2

- Excellent Mechanical Properties: Each SIC tube is tested to guarantee its safety and mechanical reliability.
- High Resistance to erosion: Hardness is very high, 50% higher than tungsten carbide, SIC tubes are very resistant to erosion, it allows a higher fluid velocity to improve the heat exchange efficiency.
- High cleanliness and resistance to permeation: SIC tubes which our company used is pure, it didn't contain any other filler, it is totally resistant to all fluids and gases even at high temperature and pressure, it avoids contamination in high purity applications.
- High Thermal Conductivity: Thermal conductivity of SIC is similar to Graphite and much higher than other corrosion resistance materials (PTFE, glass, compound special alloys, noble metals).

### ■ 反应烧结碳化硅管耐腐蚀性能性能指标

Reaction sintered silicon carbide tube corrosion resistance performance

腐蚀介质 Chemical medium	温度 Temperature (°C)	腐蚀速率 Corrosion rate mg/(cm <sup>2</sup> · y)
98% H <sub>2</sub> SO <sub>4</sub>	100	59
65% HNO <sub>3</sub>	100	2.4
37% HCl	86	1.6
85% H <sub>3</sub> PO <sub>4</sub>	100	9.2
50% NaOH	100	≥1000
45% KOH	100	≥1000
54% HF	RT	35
10% HF (65%) + HNO <sub>3</sub> (65%)	RT	≥1000
10% HF (65%) + HNO <sub>3</sub> (65%)	100	≥1000

附注：样品浸没在高压釜中腐蚀介质中，放置到烘箱中测试，测试时间2周。失重≥1000，几天内损坏；100–999，寿命一个月；50–99，寿命一年；10–49，长期使用，特殊工况慎用；0.3–9.9，长期使用，≤0.2，长期使用，制品表面无任何腐蚀。

Note: sample immersion corrosion medium in the autoclave, place into the oven test, test for 2 weeks. Weightlessness ≥ 1000, damage within a few days; 100–999, one month; 50–99, one year; 10–49, use for a long time, special conditions careful; 0.3–9.9, use for a long time. ≤0.2, use for a long time, product surface without any corrosion.

### ■ 碳化硅换热器的结构特点 The structure characteristics of silicon carbide heat exchanger

换热器是有无压φ19×2mm和φ14×1.5mm以及反应φ25×4mm和φ30×5mm碳化硅管，PFA模压管板以及壳体组成，在碳化硅管两端均有独立的密封组件，与物料接触只有F4件和碳化硅管。Standard length φ19×2.5mm and φ26×3mm silicon pipe can be used in any nominal diameter shell, there are O type seal of each pipe's end. Only PTFE and silicon tube contact with the material.

### 新型双管板结构 New double tube plate structure

双管板结构具有可靠性高，寿命长的优点，由以下部件组成：

- 1) 一个衬PFA主管板，在化工物料一面，安装F4密封件，起到很好的防腐性能。
- 2) 一个副管板，含有密封组件（弹性橡胶圈，304不锈钢套）。
- 主管板为碳钢或不锈钢基体，衬PFA或FEP，衬层最小厚度为3.5mm，以保证耐腐蚀性能。
- 密封组件包含一只F4型圈及一只弹性圈以及不锈钢套，通过主副管板压紧在密封槽内，以获得良好的永久的密封性能。

Double tube plate structure with high reliability, long life advantages, consists of the following parts

- 1) A primary board, used to install carborundum tube
- 2) A vice board, contain seal assembly (o-rings, compression set).
- Primary board is carbon steel or stainless steel PFA or FEP lined min, Thickness 3.5mm, to ensure that the corrosion resistance
- Seal component contains a "O" type circle and a compact set, through the vice tube sheet pressure. Within the seal groove, in order to obtain good sealing performance.

### 双管板设计的优点 The advantages of double tube plate design

- 碳化硅管不承受机械压紧力和拉力，热应力通过密封组件释放
- 碳化硅管子与管板在冷热变化中实现可靠的密封，长期使用零渗透
- 维护简便，在现场维护不需要专用工具，任何部件可快速更换
- 广泛的化学耐蚀性，与介质接触部件均由耐蚀良好的材料制成
- 可按客户要求制作成水平或垂直的安装结构
- Carborundum tube not withstand mechanical compaction force and tension, the thermal stress is released through the o-rings
- Carborundum tube and sheet perfect sealing
- Good mechanical stability (There is no metal kernel with PTFE board)
- Easy maintenance, no need special tools, any parts can be replaced rapidly
- Chemical corrosion resistance, contact with the medium parts are made of corrosion resistant materials
- Can be produced according to customer requirements or vertical structure

### 可运用在如下的场合

- 冷凝
- 蒸发
- 降膜蒸发
- 液液换热
- 液气换热
- 气气换热

### Applicable occasions

- Condensation
- Evaporation
- Falling film evaporation
- Liquid-liquid heat exchange
- Liquid-gas heat exchange
- Gas-gas heat exchange

### 更宽范围的材料选用 A wide range of material selection

根据工况条件和介质特性，与腐蚀介质接触的部件，可选用搪玻璃、304L 或者 316L 不锈钢，特制的 PTFE 密封圈。我们的工程师会为您分析实际的问题，并给出最佳的解决方案。

According to the working condition and the media features can choose glass lined, 304L or 316L stainless steel Zinc plated carbon steel or ETFE coated. PTFE o-rings or Fluorine rubber. Our engineer will provide you analysis of practical problems, and give the best solution.

### 常规换热器部件可选材料 Heat exchanger parts optional materials

部件 parts	腐蚀介质走管程 medium through
壳体 body	碳钢、搪玻璃，衬F4 Carbon steel galvanized, glass lined, F4
换热管 heat exchanger pipe	无压 φ19×2mm φ14×1.5mm 反应 φ25×4mm φ30×5mm
主管板 main pipe plate	CS/PFA、304L/PFA、304L/FEP
副管板 vice pipe plate	碳钢，碳钢镀锌、304L或316L Carbon steel galvanized 304L or 316L
封头 end cover	搪玻璃、glass lined 304L、316L、喷涂PFA ETFE模压F4

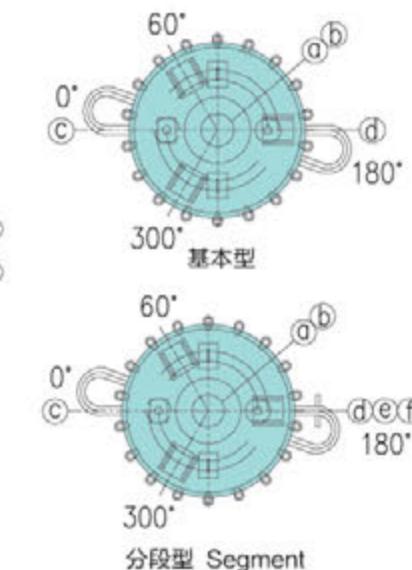

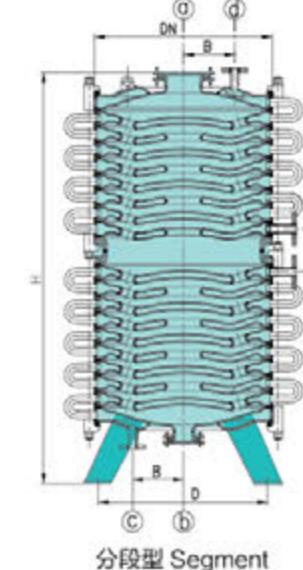

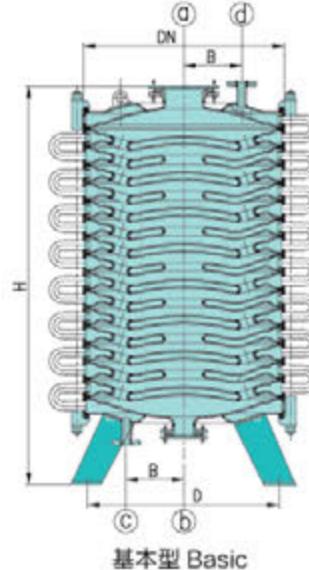

### ■ 碳化硅换热器的主要参数 Main parameters

- 标准的法兰连接为PN10或者ANSI 150 lbs，若需要其他的法兰连接尺寸，请在订单内标明。
- 腐蚀介质走壳程或管程均可实现，如未标明，以走管程为标准产品。
- 水平或垂直安装，支座位置，均可由客户指定。
- 换热器详细安装尺寸及图纸请咨询我公司技术部获得。
- Standard Flange PN10 or ANSI 150 lbs, other standard size can be manufactured on request.
- Corrosive medium can through from the shell and the pipe, if there is no special indicate standard through pipe.
- Horizontal or vertical installation, support position, can be specified by the customer.
- Detailed installation dimensions and drawings please consult technical department.

## 搪玻璃多孔片式冷凝器 W Glass lined plate condenser W

### ■ W 系列 (HG/T 4298-2012)

- 设计压力: 器内FV~0.1 MPa 夹层0.3 MPa
- 设计温度: 200°C

● 垫片 I 类材料为石棉纤维板外包四氟，II类材料为丁腈橡胶外包四氟。

The gasket type I material is asbestos fiber and the corrugated ring outsourcing tetrafluoroethylene, II class material for nitrile rubber outsourcing tetrafluoroethylene.

普通型片式冷凝器

由于采用比进料口径小很多的单个开孔（交叉180°叠放组合），故设备流体阻力非常大，不适合在高真空中使用（真空可达130Pa）。结构新颖，流体在冷凝片内产生强制对流，无死区；水夹层薄、独特的折流板设计，加快冷却水流速，无死区，不易结垢，故换热效果非常好。

垫片内垫层为厚度20mm橡胶，设备开停车时热胀冷缩变形大，易泄漏，尤其是在高真空中使用时容易被吸入器内。其换热效率较低，容易结垢，且不易清洗。

Common plate-type condenser

The smaller single home opening (reciprocal chiasma 180°) can increase the fluid resistance, so the distribution of the gas is uneven and easy to cause bias current, thus it is not proper to use in vacuum.

# 搪玻璃薄膜蒸发器 WFE

## Glass lined evaporator WFE (Wiped Film Evaporator)

### ■ WFE 系列 ( HG/T 4299 - 2012 )

1.设计压力: 车内 FV ~ 0.25 MPa 夹套 0.6MPa

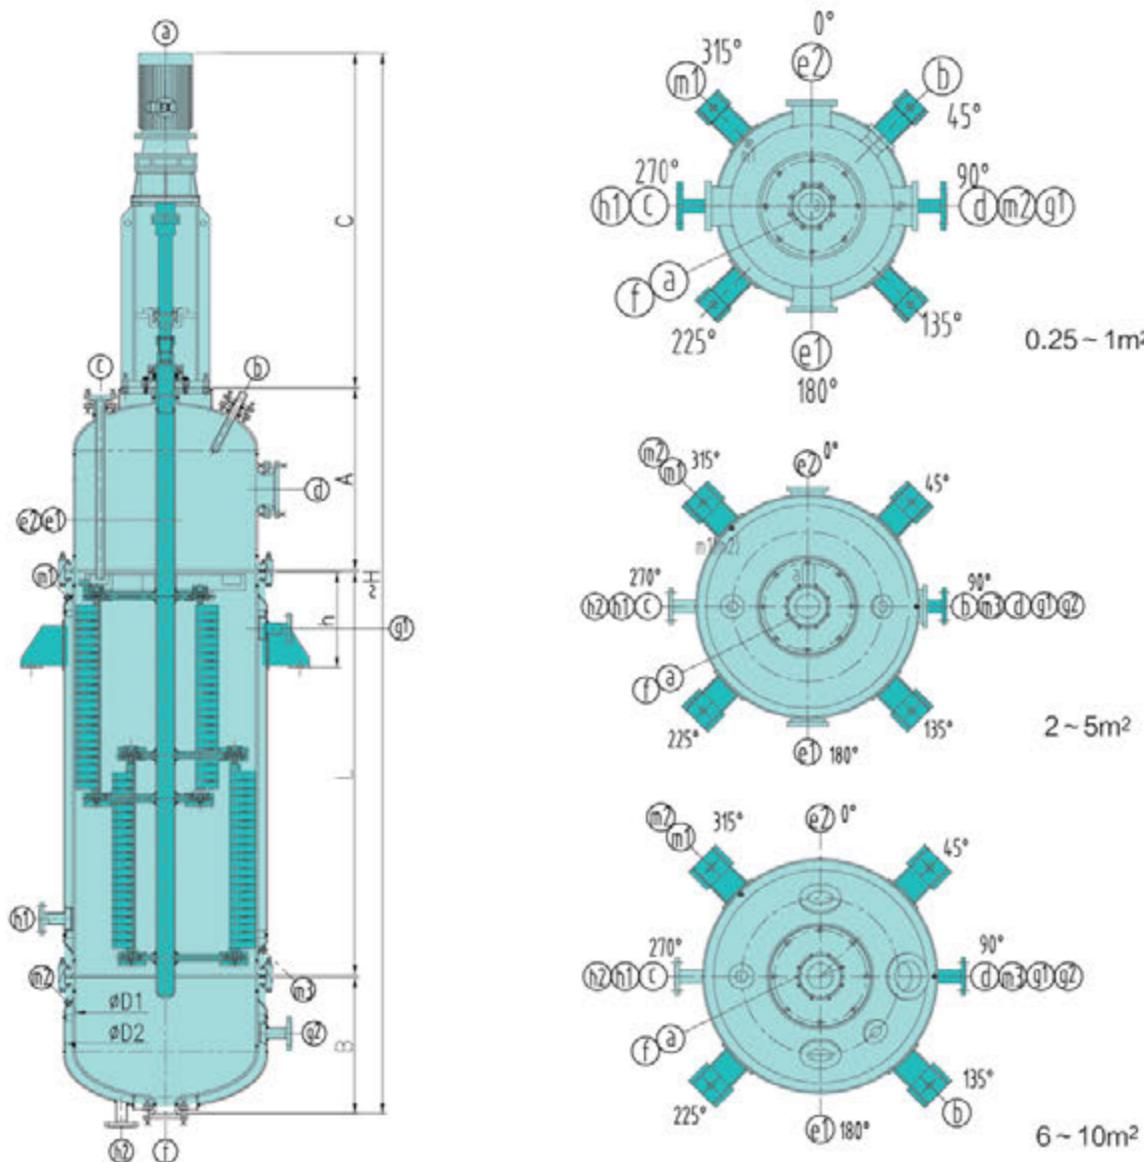

搪玻璃薄膜蒸发器内部与液态或气态物料直接接触的部位均为玻璃或PTFE等非金属材质，特别适用于强腐蚀介质蒸发、禁止金属离子析入的物料、高粘度物料处理、热敏性物料处理以及高沸点物料的蒸发处理等场合。

### ■ WFE series ( HG/T 4299 - 2012 )

1. Design pressure: Vessel FV - 0.25 MPa Jacket 0.6MPa

Film Evaporator is designed to evaporate a liquid material by making it a thin film under vacuum and at lower temperature. Without thermal attack to the material to be treated.

Accordingly, this evaporator is best suited for refining, condensation, de-odorizing, etc. And for substances which are heat-sensitive.

## 一体式快开视镜 Integrated quick sight glass

■ 设计温度: 0°C ~ 200°C  
设计压力: FV ~ 0.6MPa  
规格: DN80 DN100 DN125 DN150  
Design temperature: 0°C ~ 200°C  
Design pressure: FV ~ 0.6MPa  
Size: DN80 DN100 DN125 DN150

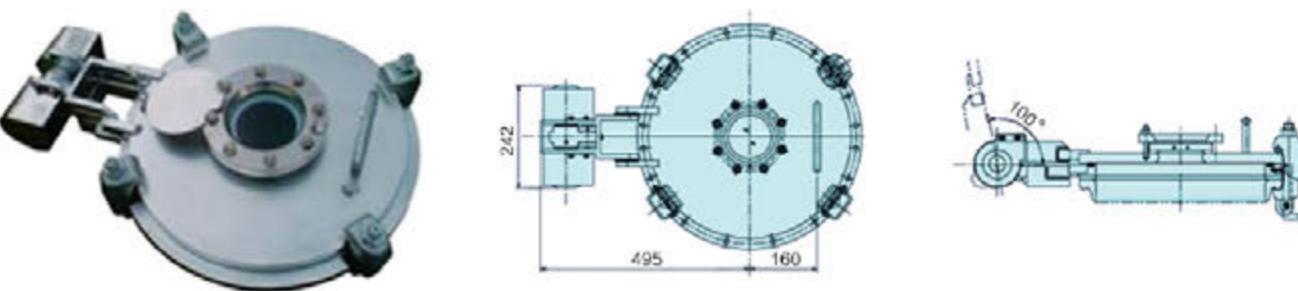

■ 易清洗 Easy to clean  
无死角 No dead end  
可视性好 Good visibility  
拆装简便 Simple disassembly

## 弹簧平衡式开关装置 Spring balance switch device

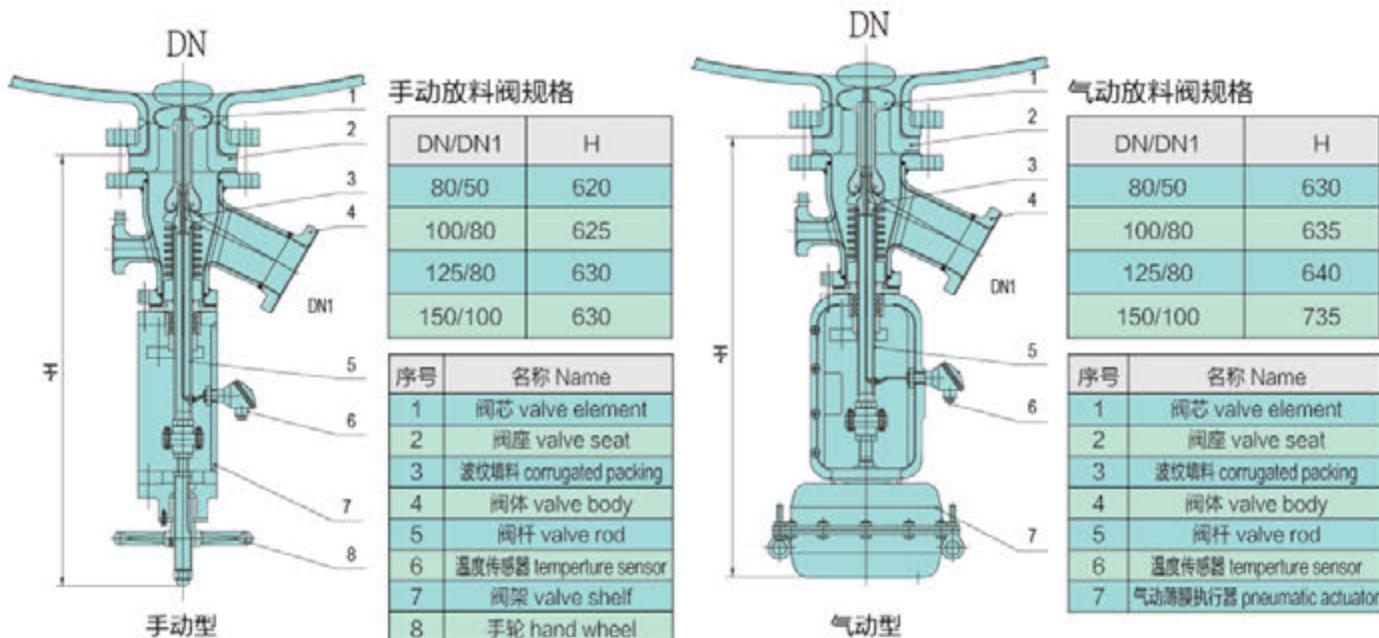

此装置是为了方便地开关人孔盖而设计。通过调整内部弹簧的扭力，最大可以开关50kg的重量。由于人孔盖下面安装搪玻璃保护环，这种安全的设计有效地保护了人孔不受损坏。本开关装置采用国外最新型的设计，结构紧凑、外形美观，能有效地降低工人的作业强度。

This device has been developed for facilitating opening and closing of the manhole cover. Up to 50kg load of opening and closing load can be applied by adjusting the inside cone disc spring. Since the glass lined protection ring is provided, the manhole can be protected as well as a safety designed can be realized. This device can be also mounted on the existing equipment.

## 搪瓷放料阀 Glass lined feeding valve

■ 设计温度: -25°C ~ +200°C  
设计压力: FV ~ 0.6MPa  
Design temperature: -25°C ~ +200°C  
Design pressure: FV ~ 0.6MPa

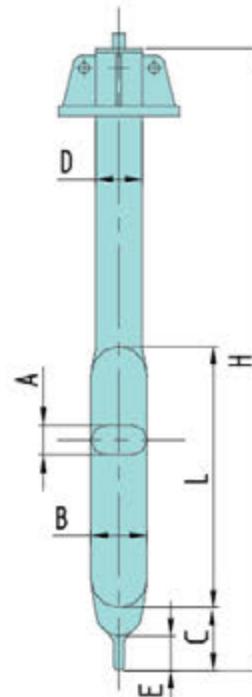

● 与物料接触部位表面均为搪玻璃，关闭时阀杆插入搪玻璃罐内，将积聚在罐底管口内的物料降到最少。  
根据需要可选配测温电阻、气动及手动不同出料口径放料阀。  
Liquid contact face is glass lined, valve stem inserted into the vessel, liquid accumulation can be extremely minimized.  
Special size and accessories can be supplied on request.

## 搪玻璃测温挡板 Glass lined sampling baffle

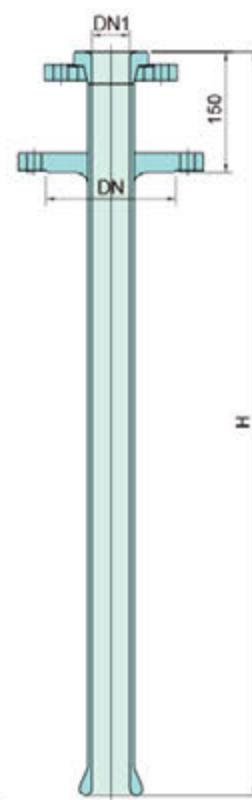

采用国外最新结构设计的全新测温挡板，将测温套管与搅拌挡板两者功能合二为一，与国内普通测温套管相比，具有显著增加搅拌效率、测温响应时间短等优点。

Glass lined sampling baffle is provided so that the temperature for a small amount of liquid can be measured.

## 两叶式搅拌器 Two vane agitator

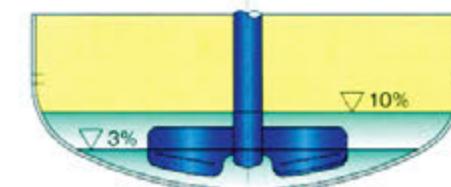

全新结构的两叶式搅拌器用来取代传统的三叶后掠式搅拌器并能适应其它新的需求

New structure of the two leaf agitator is used to replace the traditional 3 leaf after grazing agitator and can adapt to other new requirements

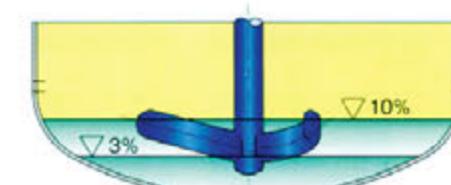

低液位时搅拌器状态 Agitator state at low level

两叶式 Two vane type

3%液量时也能较好的混合  
Better mix at 3% liquid level

3叶后掠式 Impeller type

液量低于10%时，难以混合  
Hard mix under 10% liquid level

### 搅拌叶片形状

- 基本形状类似于四叶式搅拌器的下叶片
- 搅拌器叶片宽度大约为容器内直径的50%
- 搅拌叶片下缘设计成与盖底形状相吻合的后弯形
- 搅拌叶片下缘设计成不规则的四边形

### 优势

- 中低粘度的混合性能是叶轮式搅拌器的1.5~2倍
- 使固液混合所需动力为叶轮式搅拌器的50%~80%左右
- 当容器内仅有3%的容量时仍有较好的混合
- 在闭式反应釜中可替代叶轮式搅拌器
- 形状简单便于清洗
- 混合时间缩短
- 液滴分散均匀所需动力为叶轮式的80%左右
- 气液分散性能为叶轮式搅拌器的两倍

### Agitator blade shape

- Basic shapes similar to the four leaf agitator blades
- Agitator width is about 50% the diameter of the reactor
- Mixing blade edge after designed in conformity with the kettle bottom shape of the curved
- Edge of mixing blade is designed to irregular quadrilateral

### Advantage

- Low and medium viscosity of the mixed performance is 1.5~2 times that of the impeller stirrer
- The power for the solid liquid mixed to 50%~80% of the impeller stirrer
- When the reactor is only 3% of capacity still has a good mix
- In a closed reaction to replace impeller stirrer
- Shape simple easy to clean
- Mixing time shorten
- Power for the droplets dispersed evenly for about 80% of the impeller type
- Gas-liquid dispersion for twice the impeller stirrer

### 搅拌试验

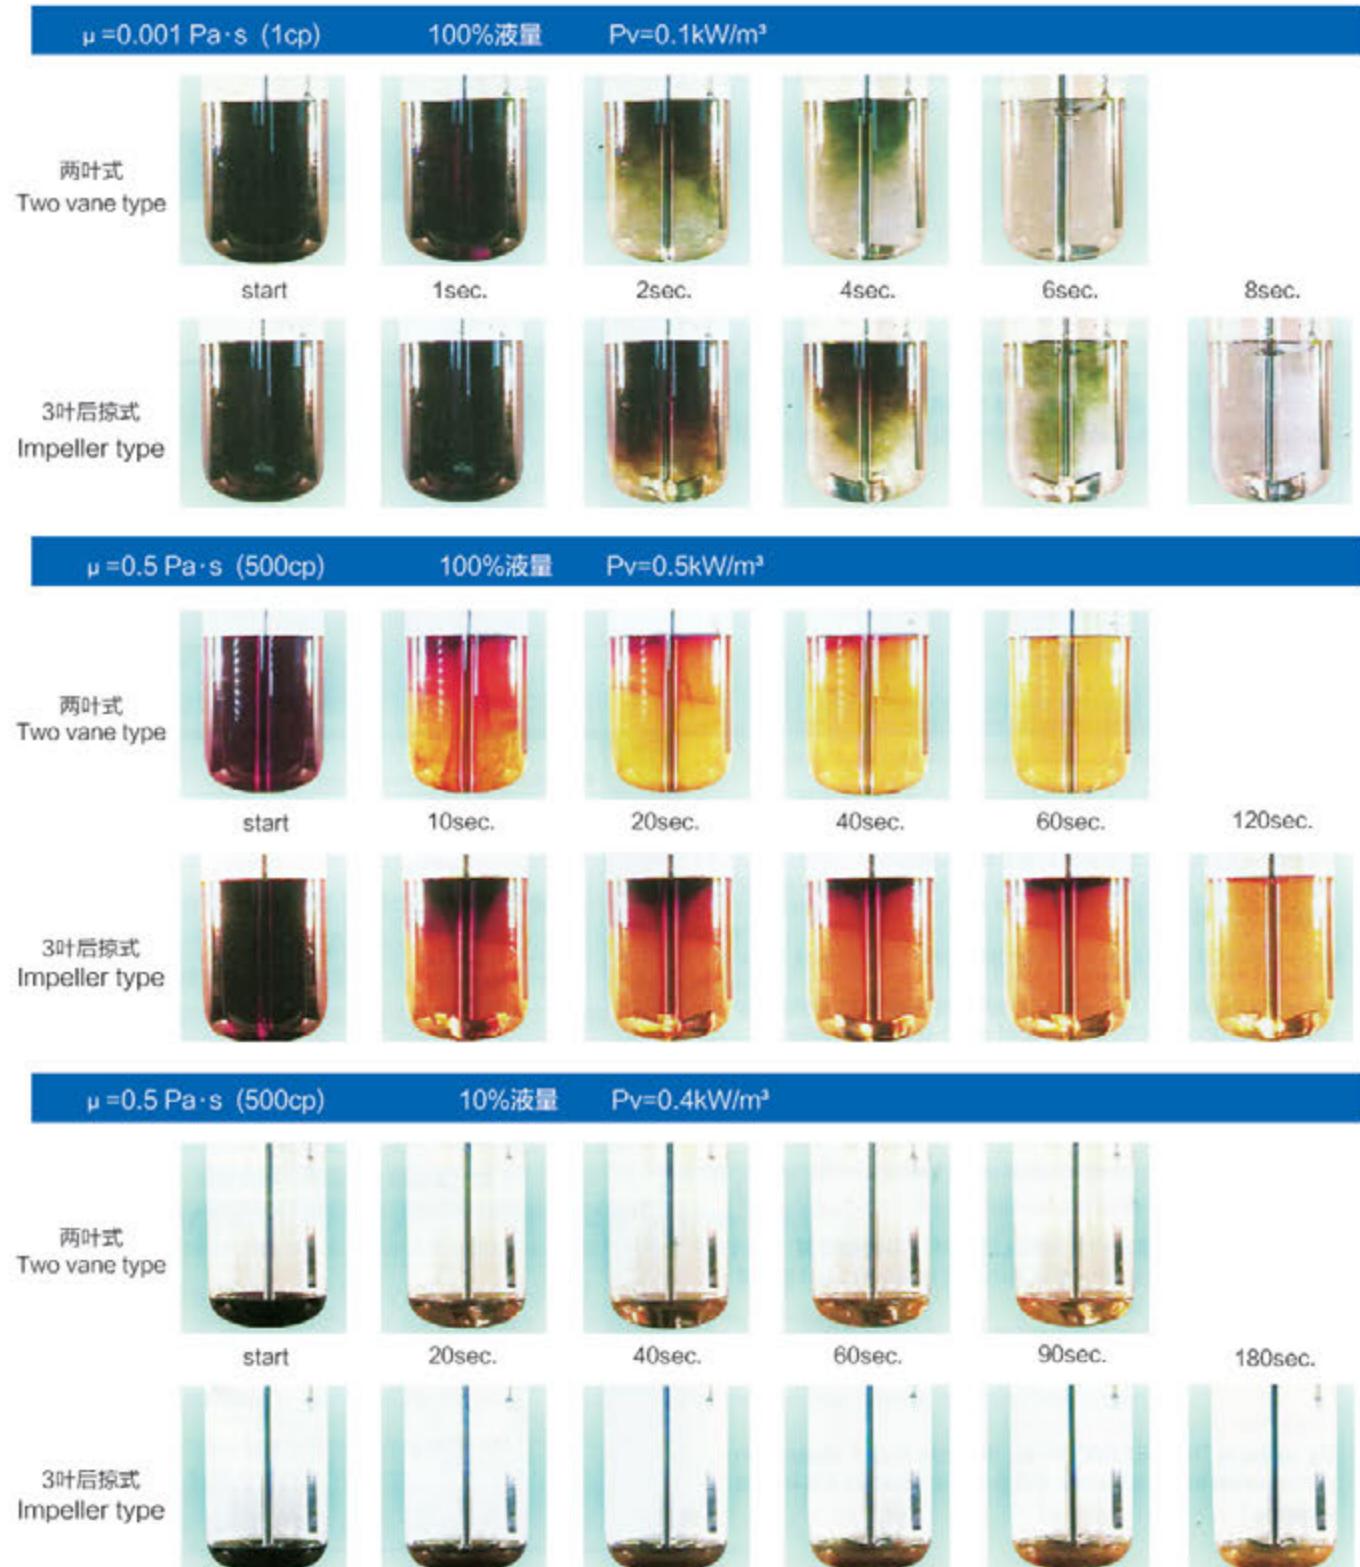

两叶式与叶轮式比较

试验两种不同粘度液体中用硫代硫酸钠对碘淀粉溶液的脱色反应回比

Mixing test

Two vane and the impeller type to compare

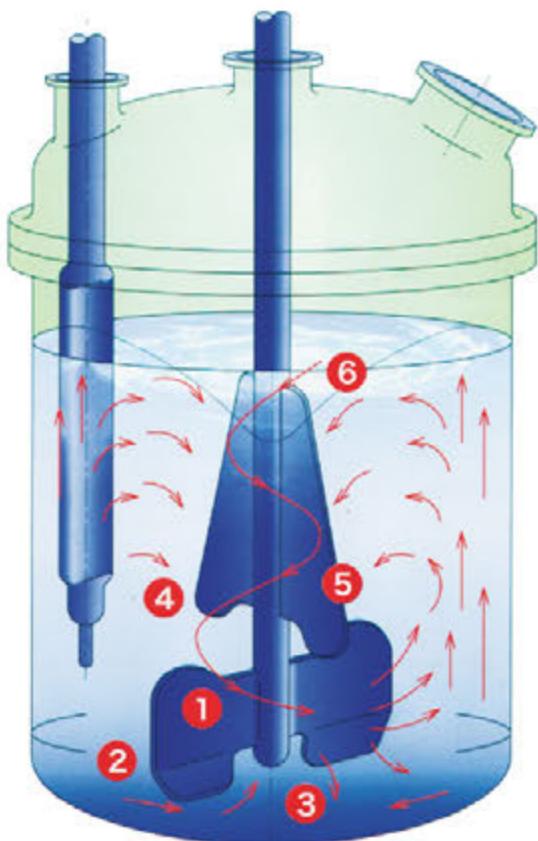

Experiment two liquids with different viscosity with sodium thiosulfate to iodine contrast the decolorization of the starch solution reaction

## 四叶式搅拌器 Four vane agitator

四叶式搅拌器是具有独特流线型叶片组成的新一代高性能搅拌器

Four vane agitator is uniquely streamlined blade of a new generation of high-performance blender

上下叶片的搅拌力恰到好处的平衡，促进了大范围的液体循环，并防止釜底部固体物料的滞留

Blade stirring force up and down the right balance, promote the wide range of liquid circulation, and to prevent retention of solid materials at the bottom of the reactor

### 下叶片特征

- 下叶片宽度为容器内径的60%
- 叶片下缘设计成弯曲状，以增加对釜底的搅拌力
- 叶片下部切割成不规则的四边形，增加搅拌器的抽吸效果
- 叶片上部设计成弧形以增加对容器壁的搅拌力

The upper blade characteristics

- The upper blade width is 60% of the reactor ID
- Edge of blade design into a curved shape, to increase the stirring force on the bottom of the reactor
- Lower leaves cut into irregular quadrilateral, increasing suction effect of agitator
- The upper blade designed curved to increase the mixing power the walls of the reactor

### 上叶片特征

- 上叶片长度为下叶片的两倍
- 较窄的上缘防止叶片形成过度的搅拌流，并促进下叶片形成循环流动

The top part of the blade characteristics

- Length of top part twice of the lower part
- On a narrow margin to prevent blade form excessive mixing flow, and promote the blade form circulating

### 优势

- 适合幅度很大的粘度范围
- 安全混合时间大幅度缩短
- 液位变化时仍能保持完美的气液混合特性，强烈的循环流动，增加了气液接触面积，加快了气体吸收
- 均匀的固体分散性能
- 以较小的动力消耗达到优良的混合效果
- 最大限度的减少结晶粒子的破碎
- 在釜内全部换热面上都有较高的传热指数和稳定的传热特性，温和平缓的液流最适合结晶反应

Advantage

- Suitable for large viscosity range
- shorten the mixing time
- Liquid level changes can still maintain perfect gas-liquid mixing characteristics, strong circulation flow, increase the gas-liquid contact area, to speed up the gas absorption
- Solid dispersion properties of uniform
- With smaller power consumption to achieve good mixing effect
- Minimize crystal particle breakage
- All inside the reactor has higher index of heat transfer of heat transfer surface and the stability of the heat transfer characteristics of mild gentle flow is most suited to the crystallization reaction

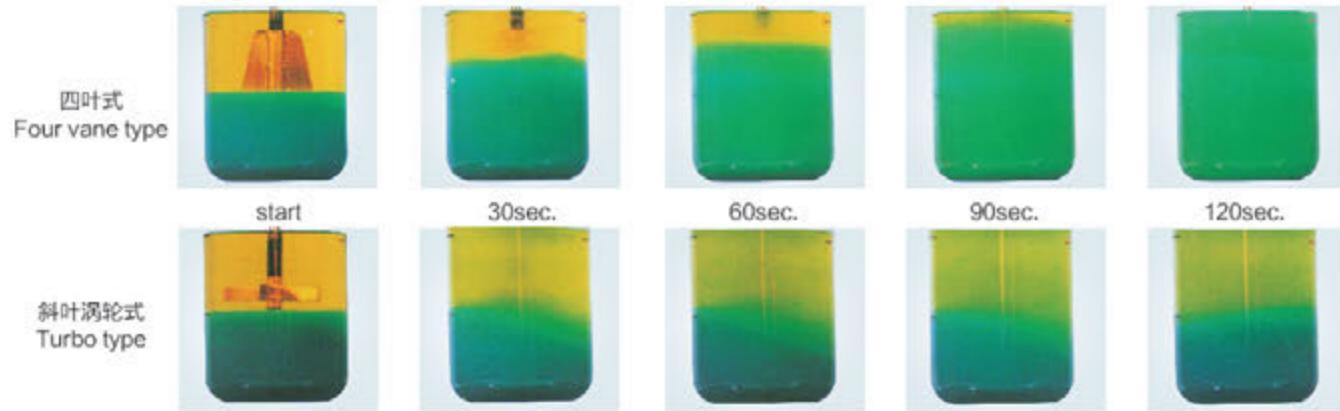

### 混合试验

① 两种液体混合试验  
具有明显比重差异的两种液体混合性能对比  
条件:  $p_j / p_0 = 1.54$   
 pj : 谷物胶的比重  
 po : 色拉油的比重  
 转速: 250rpm  
 所需功率: 四叶式 ~1.5kW/m<sup>3</sup>  
 涡轮式 ~2.6kW/m<sup>3</sup>

### Mixed test

① Two liquids mixed experiment  
Significant proportion of two kinds of liquid mixing performance comparison  
Conditions:  $p_j / p_0 = 1.54$   
 pj : The proportion of grain glue  
 po : The proportion of salad oil  
 Speed: 250rpm  
 The required power: Four vane type ~1.5kW/m<sup>3</sup>  
 Turbo type ~2.6kW/m<sup>3</sup>

#### Mixing test of two liquids

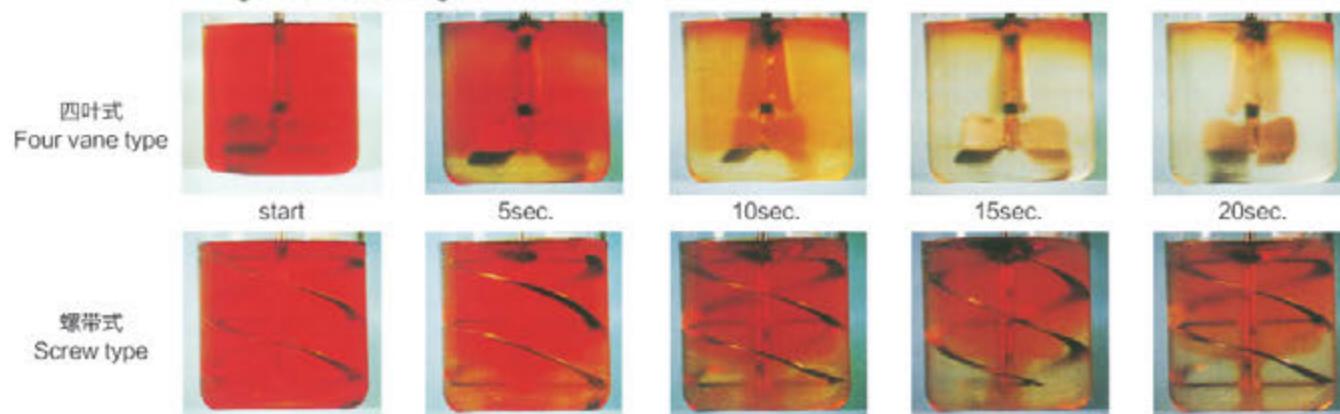

### ② 脱色反应试验

高粘度溶液脱色化学反应  
条件:  $\mu$  (液体的粘度) = 5000cp(5Pa · s)  
 P (所需功率) = 2.0kW/m<sup>3</sup>  
 转速: 四叶式 ~300rpm  
 螺带式 ~150rpm

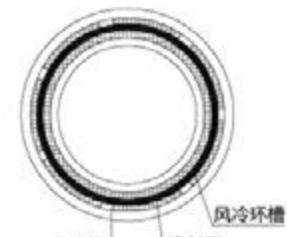

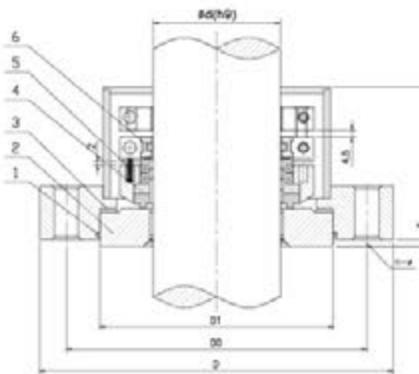

### ② Decolorizing reaction test

High viscosity solution bleaching chemical reaction  
Conditions:  
 μ (The viscosity of the liquid) = 5000cp(5Pa · s)  
 P (The required power) = 2.0kW/m<sup>3</sup>  
 Speed: Four vane type ~300rpm  
 Screw type ~150rpm

#### Mixing test of decolorizing chemical reaction

## ZY212F型干磨式机械密封 ZY212F Dry Milling model Mechanical Seal

ZY212F II型 (干磨风冷) ZY212F III型 (干磨风冷耐压)  
(日本配方及结构) (日本配方及结构)

### 产品特点:

#### PRODUCT FEATURES:

特殊配方的摩擦副无需润滑、冷却，有机玻璃可拆卸式防尘装置，易于清理、保养、安装。结构尺寸短可装进所有机架。与介质接触部材料均为非金属，可耐强腐蚀。

The model is with special formula of friction without lubrication, cooling, organic glass removable dustproof device, easy cleaning, maintenance, installation. Structure size can be put into all the short. Contact with the media are non-metal material, resistant to strong corrosion.

140	280	335	375	12-18	79.91

注: 连接法兰尺寸可根据客户需求做适当改动。

Note: the flange size can make the appropriate changes according to the customer demand.

适用范围  
反应釜、薄膜蒸发器（食品、药品等不能被污染企业首选）

### 使用参数

- 设计压力: -0.1 ~ 0.5MPa
- 设计温度: -40 ~ 150°C
- 设计转速: 2m/s
- 轴径: 30 ~ 220mm
- 介质: 强腐蚀工况

### 结构特点

- 干磨式设计没有密封液污染物料
- 独特的密封面材料配方保证长久可靠运行(日本配方及结构)
- 与介质接触部均为耐强腐蚀材料

### 易损件明细

1. 静环O型圈 (氟橡胶)
2. 静环 (ALO/SIC)
3. 静环垫片 (PTFE)
4. 动环组件 (填充四氟, 日本配方)
5. 弹簧 (304L、涂PE或PTFE)
6. 动环O型圈 (氟橡胶、包氟橡胶、全氟醚橡胶)

APPLICATION SCOPE:  
Vertical reactor for pharmacy and food industries

### OPERATION APPLICATION SCOPE:

- Pressure : -0.1 ~ 0.5MPa
- Temperature : -40 ~ 150°C
- Rotating speed: 2m/s
- Shaft diameter: 30 ~ 220mm
- Medium :High corrosive working condition

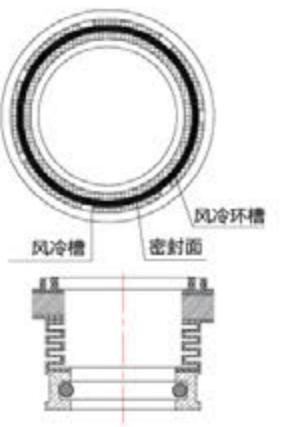

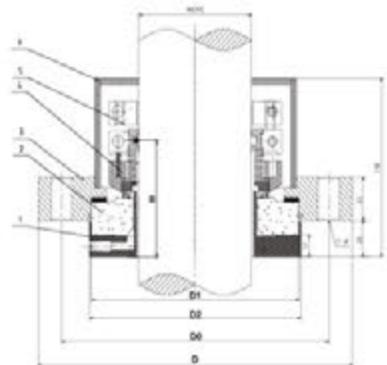

### STRUCTURE FEATURE:

- Dry seal prevents material from polluting by seal liquid
- The particular material of the seal surface can keep dry seal working long and stably
- High corrosion resisting material is used for parts which contacts medium

### WEARING PARTS LIST:

1. O ring of stationary seal ring
2. Stationary seal ring
3. Gasket of stationary seal ring
4. Bellows rotating seal ring
5. Coil spring
6. O ring for rotating seal ring

## ZY212FJ型干磨洁净型机械密封 ZY212FJ Dry Milling Clean model Mechanical Seal

ZY212F II型(干磨风冷)  
(日本配方及结构)

### 产品特点: PRODUCT FEATURES:

特殊配方的摩擦副无需润滑、冷却，有机玻璃可拆卸式防尘装置，可收集清理摩擦产生的微量污染，通过反冲洗，可洗掉结晶。易于清理、保养、安装。结构尺寸短可装进所有机架。与介质接触部材料均为非金属，可耐强腐蚀。

The model is with special formula of friction without lubrication, cooling, organic glass removable dustproof device, easy cleaning, maintenance, installation. Structure size can be put into all the short. Contact with the media are non-metal material, resistant to strong corrosion.

### 适用范围

反应釜、薄膜蒸发器（食品、药品等不能被污染企业首选）

### 使用参数

- 设计压力：-0.1~0.5MPa
- 设计温度：-40~120℃
- 设计转速：2m/s
- 轴径：30~220mm
- 介质：强腐蚀工况

### 结构特点

- 干磨式设计没有密封液污染物料
- 独特的密封面材料配方保证长久可靠运行(日本配方及结构)
- 与介质接触部均为耐强腐蚀材料

### 易损件明细

1. 洁净盒（波纤）
2. 静环 (ALO/SIC)
3. 静环压盖 (304)
4. 动环组件（填充四氟，日本配方）
5. 压紧环
6. 防尘罩

## ZY212FL/FJL型干磨冷却型/带收集型机械密封 ZY212FL/FJL Dry Milling Cold model Mechanical Seal

ZY212F II型(干磨风冷)  
(日本配方及结构)

### 产品特点: PRODUCT FEATURES:

特殊配方的摩擦副无需润滑、冷却，有机玻璃可拆卸式防尘装置，带冷却水套（可减低温度对机封影响）。易于清理、保养、安装。结构尺寸短可装进所有机架。与介质接触部材料均为非金属，可耐强腐蚀。

The model is with special formula of friction without lubrication, cooling, organic glass removable dustproof device, easy cleaning, maintenance, installation. Structure size can be put into all the short. Contact with the media are non-metal material, resistant to strong corrosion.

### 适用范围

反应釜、薄膜蒸发器（食品、药品等不能被污染企业首选），可选带收集的。

### 使用参数

- 设计压力：-0.1~0.5MPa
- 设计温度：-40~180℃
- 设计转速: 2m/s
- 轴径：30~220mm
- 介质：强腐蚀工况

### 结构特点

- 干磨式设计没有密封液污染物料
- 独特的密封面材料配方保证长久可靠运行(日本配方及结构)
- 与介质接触部均为耐强腐蚀材料

### 易损件明细

1. 静环座（带水套）
2. 静环 (ALO/SIC)
3. 静环压盖 (304)
4. 动环组件 (填充四氟，日本配方)
5. 压紧环
6. 防尘罩

## ZY461型机械密封 ZY461 Mechanical Seal

- 非平衡型
- 任意旋向
- 集装式设计
- Unbalanced
- Independent
- Cartridge unit

ZY461系列：仿博格曼双端面机封，结构合理，防腐优越，该系列密封与介质接触的零部件均采用非金属材料。是进口及国内2009等各种双端面机械密封的最佳替代品。

The ZY461 copy Germany Burgmann double seal, the material which corrosion fluid both corrosion resistance (enamel, SiC or PTFE), it's being used on carbon steel, stainless steel material, Glass, PP or PTFE lined equipment. JM461 could replace the non-reasonable structure 2009 etc. seals.

# 搪玻璃设备的安装、使用与保管

## Glass lined equipment Installation、Operation and Storage

### ■ 搪玻璃设备的安装

- 搬运时只允许罐耳受力（指非包装时），不允许滚动及用撬杠，避免震动、碰撞，严禁接钢管接、卡子等易损部件受力。
- 吊装时必须在规定部位（如夹套接管、罐耳等）挂钢丝绳。（罐盖上的吊环只作吊罐盖使用），不能与任何物体相碰，稳吊轻放。
- 组装前，检查人员应穿洁净软底胶鞋进入容器内检查搪玻璃层有无异常现象。
- 在拧紧法兰螺栓时，应使用扭力扳手按沿对角线成对地逐渐拧紧、用力要均匀，不应一次完全拧紧，最大扭矩超过200NM时，应停止，检查影响密封的其它原因，避免因受力不均而造成搪玻璃层破裂而影响使用寿命。
- 应先检查卡子是否完整，数量是否符合规定，安装时要保证距离均等，松紧适度确保运转安全及密封可靠。
- 安装人员应穿洁净软底胶鞋进入容器内，将固定搅拌翼的包装物全部拆除，清理容器内所有杂物。拆除机械密封包装物，正确合理调整好机封压缩力，手动盘转搅拌翼，当运转灵活无异常时，才允许启动电机。
- 公司搪玻璃容器一般使用的垫片材料为：无石棉纤维板夹不锈钢波纹板，外包PTFE膜。垫片厚度在不同部位可能会稍有不同，拆装时应做好位置标记，否则再次安装时可能会出现泄漏现象。
- 严禁在搪玻璃罐外壁表面施焊；在夹套上焊接接管、罐耳、罐座时，一律使用电焊，并采取冷却设施，绝对不准使用气焊；在搪玻璃设备外围施焊时，应将搪玻璃表面、罐口、管口盖严，避免电焊渣飞溅，损坏搪玻璃面。

### ■ INSTALLATION

- The lugs is only lifting place(unpackaged). Do not roll or use crossbar. Avoid vibrating or bumping.Pulling coupler and clamps is forbidden.
- Wire rope must be hitched on setted palace such as nozzles of jacket and supports. Handle with care. Don't collide.The lift hooks on the head are only used to sling the head.
- The inspector whose should be rubber-soft sole and clear, gets into the vessel to inspect if the glass-lined surface was damaged and if there were abnormal phenomena.
- Along the diagonal line , tighten screw bolts gradually.Put forth your strength evenly so as to avoid damaging the glass-lined layer.
- Firstly check the integration and quantity of clamps .When fixing , keep the distance between clamps equal ,the degree of tightness fair in ordre to assure operating safely and sealing reliably.
- Firely, put the agitator into the vessel (put a soft mat on the bottom of the vessel before hand),Then life the head and take its predetermined place , and covered the shaft the shaft sealing device, Life up the agitator, connect it with the output shaft of the motor, and lock them with check nut or check bolt.Adjust the axiality and perpendicularity of shaft and seal up to technical specification. turn the agitator slowly. If there is no abnormal phenomena, and the agitator rotates freely, then try starting motor till everything is all right.(The time of running-in is not too long).
- Select the gasket based on the medium category, concentration and temperature of the working medium. The performance and using method of the gasket should meet the technological requirements. We can provide the gasket, such as asbestos filled rubber and rubbers covered with PTFE.
- Do not weld at the external surface of inner Vessel.When welding nozzles, lugs and supports, employ electro and tack cooling measures. Gas welding strictly prohibited.When welding the outside fittings of glass-lined surface and nozzles must be covered tightly to avoid damaging them by splashing welding slag.

### ■ 搪玻璃设备的使用

#### 在使用中注意：

- 严防任何金属硬物掉进容器，碰伤搪玻璃。
- 尽量避免冷罐时加热料，热罐时加冷料，由于突然改变温度，形成内应力，影响使用寿命。
- 操作运转在使用夹套设备时，应徐徐加压、升温，一般先通入0.1MPa（表压）压力蒸汽，保持15分钟后，再缓缓升压、升温（升压速度以每10分钟0.1MPa压力为宜），直到罐的操作压力为止，不管加热或冷却都应在允许温度范围之内进行，设备使用温度0~200°C，冷热冲击请参照第13页图A、图B(一般规定为热冲击120°C，冷冲击110°C)。超过上述使用温度范围，订货合同中注明，另行设计制造。
- 出料：出料时，如出料阀、出料管堵塞，一律用非金属工具轻轻捅开，不得碰敲。
- 在使用中严防夹套内进入酸液，以防止腐蚀夹套铁胎和“氢爆”现象发生。
- 清洗：清洗罐内部时，不能使用金属器具，而且对粘结在罐内面上的物料必须清洗及时、彻底。

### ■ OPERATION

- Prevent only metal and hard object from dropping into the vessel to damage glass-lined surface.
- Since temperature changed suddenly, the service life of vessel is influenced by internal stress. So the user must try their best to avoid feeding hot material into hot reactor.
- When operating a jacketed equipment,generaly,first 0.1MPa(g) pass through it and maintain this pressure for 15 minutes, then raise pressure and temperature slowly till operating pressure. (It's suitable for raising pressure at 0.1MPa every ten minutes). Heating or cooling shall be within specified temperature,The operating temperature of the equipment is 0~200°C, Resistance to sudden cooling:110°C , resistance to sudden heating:120°C.  
If the temperature is beyond the limits, please give clear indication in order contract, we can do it specially.
- Discharge: if outlet valve, outlet pipe are obstructed, use nonmetallic tool to poke, Don't bump and strike rudely.
- Filling acid liquid into jacket is not permitted. So as to avoid corroding the tare of jacket.
- Cleaning: Do not use metal tool to clean the internal. The sticking material must be cleaned timely and thoroughly.

### ■ 搪玻璃设备的保管

保管应妥善，应置于库内，如置于室外时，应有防雨措施，严防雨淋，尤其寒冷地区，在冬季前必须清除罐内、夹套内、管内的积水、避免因结冰膨胀，引起玻璃面损坏，在保管时，应防止硬物摩擦、冲击、碰撞。

说明：本说明书中所列数据仅供参考，详细请参照竣工图。

### ■ STORAGE

Take good care of the equipment and keep it in store house. When equipment is stored outdoors, it should be covered avoiding drenched. In order to avoid freezing and crazing the glass-lining, the gathering water in shell, jacket, pipe must be clear away before winter comes particularly in cold district. Preventing friction, striking friction, striking and bumping in the storage period.

Note: The data in this specification only for reference, the detail see final drawings .
